

## Table of good *abc*-examples, I

Abderrahmane Nitaj

September 11, 2008

The Table I contains all examples  $a + b = c$ , related to the *abc*-conjecture, satisfying  $0 < a < b < c$  and  $(a, b) = 1$ , known to me with  $\alpha \geq 1.4$ , where

$$\alpha = \alpha(a, b, c) = \frac{\log(c)}{\log(r(abc))},$$

and  $r(abc)$  is the radical of  $abc$  (i.e. the product of the distinct prime factors of  $abc$ ).
